

NUTRI SOFT

SOIL PH REGULATOR

- * In heavy-textured (salty, calcareous and heavily alkaline) soils, it regulates the structure of the soil, swells and softens the soil. * It buffers salt and accelerates the washing of salt by increasing the permeability in the soil, and removes it from the root area.
- * It separates the minerals that have formed compounds in the soil and become useless from each other, and makes them available for the plant to absorb. (e.g. P - Ca and Fe - P)
- * It keeps the pH at the optimum level in the root area and softens the soil. * It ensures the drainage of water by making the soil permeable in agricultural lands where water accumulates.
- * It prevents ponding and eliminates excessive water stress.
- * It prevents the formation of a crust layer. NUTRI SOFT stands out with its high microcarbon structure, unlike soil conditioners in general.

USAGE AND DOSAGES:

PRODUCTS	APPLICATION FROM LEAF	APPLICATION FROM SOIL
Greenhouses	200-300 cc/100 L water	200 cc/100L water
Nursery and Cut Flowers,	200-300 cc/100 L water	200 cc/da
Orchards Open Vegetable	200-300 cc/100 L water	200 cc/100L water
Industrial Plants	200-300 cc/100 L water	200 cc/da
Green Areas	200-300 cc/min	200 cc/da
